

Commodity Internet Access

Geo-diverse, fully redundant 4x100G Internet connectivity + DDoS Mitigation

The OARnet Commodity Internet Access service provides customers access to a combination of geo-diverse, fully redundant, high-speed connections to multiple Tier1 carriers and a mix of public and private peerings. Customers are provided the reliability of utilizing multiple Internet transit carriers to help ensure uninterrupted service in the event of a single carrier or circuit failure. OARnet maintains a rich set of peerings to help ensure low latency connections and controlled costs.

The OARnet base Internet-service offering delivers both on-demand and pre-configured DDoS mitigation services to all clients. This combination of capacity, diversity and value-added DDoS mitigation would not be affordable for any one entity and can only be achieved through the OARnet aggregate purchase of these services.

OARnet Provides

- Consultation service to assist in design and configuration of service
- Support for ordering services, including identifications of recommended capacity
- Installation support, including vendor coordination and technical support
- Customer Premises Equipment (CPE) on the connection for 24x7 proactive monitoring and faster trouble resolution
- 24x7 Tier I and Tier II Engineering support and clearly defined escalation list
- OARnet clients can increase bandwidth on demand if there is additional capacity

Client Provides

- Necessary connectivity to the OARnet network to support their bandwidth subscription
- Contact and escalation list for their site
- Environment for OARnet CPE

Service Cost

Annual cost is based on client's subscription level

Client Benefits

- Clients recognize a cost savings due to aggregate purchase of internet services for all our clients, including higher education, K-12 and state/local government
- Clients receive redundancy and diversity in both connectivity and multiple providers not available from any single provider
- OARnet's Internet Service includes DDoS protection, DNS service and allocation of globally routable IP addresses
- Client receive 24x7 monitoring of their internet connections to proactively resolve issues
- No long-term contract is required initially or when changing required bandwidth
